

**Title of Presentation:**

**Fostering Creativity in Children**

**Brief Summary:**

Children display a natural tendency to be highly creative and imaginative. They fantasize, ask creative questions, and eagerly explore the world around them. Instead of being exploited, however, creativity is often suppressed in schools in favor of discipline and greater conformity. How can teachers nurture this creative spirit and keep it alive? This presentation looks at basic techniques and activities to foster creative thinking in our children as well as in ourselves.
